Managed Perimeter Security from i3 ReliabilITy

INCLUDES:

- Blocks websites – offensive and time-wasting sites, job searches, and more - automatic & customizable!
- Includes capability for 2nd Internet connection – increased performance by bonding 2 Internet connections; automatic business continuity fail-over if one connection fails (requires 2nd Internet service from cable, DSL, wireless, or aircard)
- Periodic Reporting – know what is really happening, provide reports for compliance
- Security against intrusions, viruses, spyware, and spam – protects more than just e-mail!
- Create secure VPN's to homes, remote offices, and business partners
- Unlimited user license
- Fast Throughput to match the increased bandwidth offered by cable, DSL, and wireless Internet providers
- Includes ALL installation, hardware, licensing, updates, changes, subscriptions, and telephone support
- Low set-up and monthly fee – predict your costs and spread them over 3 years.
- Secure wireless for your building—don't share your costly Internet bandwidth with outsiders; prevent unauthorized users from illegal downloads that will be traceable to your network

From $129 per month with a $399 set up fee*

* Depending on user count and internet load.
Managed by an organization of certified professionals recognized in West Michigan for technology support excellence.

Managed Perimeter Security

Content Filtering

Content filtering allows the choice of specific subjects, titles or even words to restrict what kind of material is accessible on a network. IT can be used to block sites deemed to be inappropriate.

Anti-Virus Protection

For a secure network, anti-virus software should be enforced and monitored at all times across the network.

Advanced Protection

Inspection across any port and protocol, for either inbound or outbound traffic, provides ultimate coverage against today's threats.

Application intelligence and control provides granular control and real-time visualization of applications to guarantee bandwidth prioritization and ensure maximum network security and productivity.

Comprehensive logging and application traffic analytics of all intrusion attempts. The ability to filter logs gives the power to highlight and discover network attacks.

Annual Security Analysis with Full Report

Annual Security Analysis provides vulnerability and compliance management solutions that integrate security risk discovery, prioritization, remediation and reporting.

- Define and manage security policies to monitor compliance within the industry
- Single view of security risk information within the IT environment - across all locations and assets

Compliance Reporting

To monitor your network and verify that it is compliant, you can generate related reports for the following:

- Fully HIPAA compliant for your network ℞
- Provides complete PCI solution

NEW! Reporting capabilities include several predefined reports that provide information to insure that your network is compliant with HIPAA standards. Addresses these specific HIPAA compliance standards:

- Unique User Identification (R)   § 164.312(a)(2)(i)
- Encryption and Decryption (A)   § 164.312(a)(2)(iv)
- Audit Controls Standard   § 164.312(b)
- Transmission Security Standard § 164.312(e)(1)
- Security Incident Procedures   § 164.308(a)(6)
- Response And Reporting (R)   § 164.308(a)(6)(ii)

Contact i3 Business Solutions today to get this critical security solution for HIPAA compliance at your practice.
